Khadimart Ecommerce Website - README

Welcome to Khadimart, your ultimate destination for online shopping! This README will guide you through the setup process and provide an overview of the website's features.

Setup Instructions

1.Start Apache and MySQL Server:

- Click on the start button of Apache and MySQL in your XAMPP control panel.

2.Accessing the Database:

- Open your web browser.
- Enter "localhost" in the address bar.
- XAMPP interface will open.
- Click on phpMyAdmin.
- Locate and select the shop_db database.
- Inside shop_db, you'll find 7 tables: admins, cart, messages, orders, products, users, wishlist.

3.Accessing Khadimart Website:

- In your web browser, enter "localhost/khadimart".
- This will take you to the main website homepage. **User Side Features**

1.Navigation:

- Users can navigate through various sections of the website.
- Products are categorized into Men, Women, and Kids sections for easy browsing.

2. Product Viewing:

- Users can view products without the need to log in.

3. Registration/Login:

- To purchase products or add them to the wishlist and cart, users need to register.

- After registration, users can log in using their unique credentials.

4. <u>Wishlist and Cart:</u>
